### Other Site Characteristics

Ambiente ripario della media valle centrale alla confluenza del Torrente Saint-Marcel con la Dora Baltea, in una zona a clima continentale che vanta il picco di siccità dell'intera regione. Esso è caratterizzato dalla presenza di laghi di cava in gran parte naturalizzati, da alcuni stagni e da un piccolo bosco igrofilo a salici e ontano bianco. Il livello idrico dell'area è assicurato dalla falda di subalveo. La pressione antropica è elevata.

### 4.2 Quality and importance

Si tratta di uno degli ultimi ambienti rimasti in Valle d'Aosta adatti ad ospitare una avifauna legata alle zone umide.
